Appendix 3

Self-Evaluation Tool for EI Programs: Services for Infants/Toddlers with Sensory Disabilities
(Blind/Visually Impaired, Deaf/Hard of Hearing, or Deaf-Blind)

The purpose of this tool is to help LLAs and EI agencies evaluate their readiness to support families with newly identified birth-to-three year olds with sensory disabilities. Some programs and counties have well-developed services to support families; others have few specialized resources and may not have had previous experience in serving families of young children who have hearing loss or visual impairment, or a combined vision and hearing loss. Partnering with CDHL, WSSB, and WSDS/Deaf-Blind Project will help LLAs and EI programs determine strengths and needs, and can ensure that appropriate services are located or developed. Programs that complete this self-evaluation will be better prepared to collaborate with CDHL, WSSB, and WSDS.

</table>
| 5. Program services include pediatric audiology to monitor children’s hearing loss (aided and unaided). Services may include fitting and maintaining hearing aids, and determining or referring for cochlear implant eligibility as appropriate. | - Program has pediatric audiologist/s within agency or on staff.  
- EI staff partner with pediatric audiologist/s to conduct hearing assessments.  
- Program has a close working relationship with a nearby pediatric audiologist, to facilitate access to services and to communicate about child’s and family’s needs. | 6. EI program has referring relationship with pediatric ophthalmology and optometry services for diagnostic and monitoring of children’s medical and visual diagnosis. | - Staff has knowledge of local and state medical resources in order to refer families if needed for vision concerns.  
- Staff requests appropriate medical records for information and eligibility requirements.  
- Staff is able to consult and counsel families in the implementation of doctor’s recommendations such as patching programs and use of corrective lenses. |
| (or) Program has a referring relationship with pediatric audiology services. | | | |
| **DEVELOPMENT OF IFSP** | | **DEVELOPMENT OF IFSP** | |
| 6. EI/IFSP team includes a person who meets highest “Staff Qualifications” on p. 1.  
7. Prior to development of IFSP, FRC completes Child Registry form: www.wssb.wa.gov/B3 and contacts Kris Ching as needed: kris.ching@cdhl.wa.gov  
Phone: 1-855-342-1670 | - This specialist always is on the EI team in some capacity when a child has a diagnosed hearing loss.  
- This specialist might participate via distance technology, if not in person, to ensure development of a quality IFSP with appropriate outcomes.  
- This specialist participates at subsequent IFSP meetings to ensure quality services. | 7. EI/IFSP team includes a TVI/O&M who meets the “Staff Qualifications” of #1.  
Prior to development of IFSP, FRC completes Child Registry form: www.wssb.wa.gov/B3 and contacts DeEtte Snyder as needed: deette.snyder@wssb.wa.gov  
Phone: 1-360-947-3305 | - A certified TVI/O&M is on the EI team in some capacity when child has a diagnosis of BVI.  
- A certified TVI might participate in initial IFSP development and subsequent review via distance technology.  
- If TVI is not providing ongoing services, but consultation, he/she participates in each IFSP meeting (initial and review) to ensure high quality of service to child with BVI and family. |

### SERVICES IN THE FAMILY’S NATURAL ENVIRONMENT(S)

</tbody>
</table>
### COMPREHENSIVE RANGE OF FAMILY SERVICES (DHH) (cont.)

11. Program offers a menu of early intervention services designed to support the unique needs of families with infants and toddlers who are D/HH.

Some services might be delivered via distance technology (e.g., phone, email, Skype, other web-based methods) as needed.

Frequency of support is contingent on needs of child, as well as concerns/priorities of family.

<table>
<thead>
<tr>

</tbody>
</table>

### COMPREHENSIVE RANGE OF FAMILY SERVICES (BVI) (cont.)

11. Program offers a menu of early intervention services designed to support the unique needs of families with infants/toddlers who are BVI.

Some services might be delivered via distance technology (e.g., phone, email, Skype, other web-based methods) as needed.

Frequency of support is contingent on needs of child, as well as concerns/priorities of family.

Specialty services for B-3 who are BVI would typically offer many or most of these components (not exhaustive):

- Home visits with a TVI; joint visits with TVI and a team member
- Parent support and networking, including with parents of children with similar etiologies and diagnoses
- Supports to learn strategies for development of basic concepts
- Supports to enhance social and emotional relationships between child w/ BVI, their families, peers
- Supports to learn strategies for development of pre-literacy skills in large print or braille
- Supports to learn orientation and mobility skills; independent movement at home, community
- Supports to address adaptive or self-help skills such as feeding or sleeping issues
- Appropriate toddler play groups
- Opportunities to learn from adults who are BVI
- Sibling supports
- Partnerships with eye care and medical professionals (ophthalmologists, optometrists)
### Elements | Examples/Comments | Elements | Examples/Comments
---|---|---|---
**FLEXIBLE AND POSITIVE SUPPORT FOR COMMUNICATION DEVELOPMENT**
11. Families have the opportunity to learn to communicate with their child in ways that best match the child’s needs as well as the family’s goals and philosophies. They are encouraged to discover what works best for their child and adapt as indicated.  
- Families have a choice among programs specializing in a communication approach, e.g., ASL-English Bilingual Education, Listening and Spoken Language (LSL), or Signing Exact English (SEE) combined with spoken home language.
- A program might have a staff person skilled in one communication system, but it arranges for others with complementary skills to participate in EI services (e.g., a regional service center for the D/HH (OD/HH) offers family ASL instruction; an LSL program offers consultative support).
12. Where there is only one program available in a region, that program offers supports for various communication approaches for families, either via staff skills or by partnering with other agencies.  
- EI program staff is knowledgeable about accessing services from the Ogden Resource Center (ORC) at WSSB to obtain materials from the American Printing House (APH) for the Blind.
- Program holds account with ORC at WSSB.
- All children who are eligible are registered with ORC at WSSB to access materials from APH through program account administrator.

**ASSESSMENT & MONITORING OF CHILD PROGRESS AND OUTCOMES**
13. Program conducts initial assessments that are appropriate for children with hearing loss and following ESIT requirements, with the understanding that hearing loss often invalidates results of standardized tools.  
- Staff uses appropriate tools (e.g., curriculum-based assessments such as the AEPS, Carolina, or Hawaii) and/or adapts items on standardized tools to yield functional information rather than invalid standardized scores.
13. EI program includes TVI on the evaluation team for a child with BVI (including those at risk for CVI) as the program conducts initial child assessment and following ESIT requirements/timelines.  
- If diagnosis of BVI is known at intake, TVI is notified of initial assessment procedures and included on evaluation team.
- If diagnosis of BVI is identified after initial intake and assessment, the TVI assists as soon as possible with interpretation of results and IFSP development.

</tr>
</thead>
<tbody>
<tr>
<td><strong>ASSESSMENT &amp; MONITORING OF CHILD PROGRESS AND OUTCOMES</strong></td>
<td></td>
</tr>
</tbody>
</table>
| **14.** Program monitors child’s progress on communication skills three to four times yearly, with the goal of performance at a level commensurate with child’s age or cognition, including one month progress for each month in EI. | - Staff uses appropriate tools (e.g., SKI-HI Language Development Scale, MacArthur Communicative Development Inventory, Visual Communication and Sign Language Checklist) that assess receptive and/or expressive communication and yield age-level equivalents.  
- Based on child’s progress, the EI team suggests strategies to enhance and support the family’s skills in the area of communication. |
| **15.** Based on results of ongoing assessment, staff is open to changing focus of intervention strategies to optimize child’s communication/language development. |                                                                                                                                                                                                                                                                                                                                                       |
| **ASSESSMENT & MONITORING OF CHILD PROGRESS AND OUTCOMES**             |                                                                                                                                                                                                                                                                                                                                                       |
| **14.** EI program conducts initial child assessment using tools appropriate for a child with BVI following ESIT requirements/timelines, understanding that BVI may invalidate results of some standardized tools. | - TVI conducts functional vision assessment as part of initial evaluation, or when BVI is detected, to assist team/family with understanding functional use of vision in all areas of development/routines and appropriate development of IFSP with family.  
- TVI uses CVI Range assessment procedures for children with a diagnosis of CVI or those at risk for CVI.  
- TVI assists and supports EI staff in regularly monitoring of child’s progress in all areas with recommendations of strategies/adaptations for the child’s VI to achieve optimal outcomes.  
- TVI completes review of functional vision regularly; shares information with program staff. |
| **15.** EI program staff monitors child’s progress on an ongoing basis with input from TVI.  
*Frequency of support is contingent on needs of child, as well as concerns/priorities of family.* |                                                                                                                                                                                                                                                                                                                                                       |
